

Amendments to the claims:

This listing of the claims will replace all prior versions, and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) A process ~~Process~~ for the preparation of an hypoallergenic mosaic antigen derived from an allergen whereby
 - (a) in a first step the allergen is split into at least two parts and the IgE reactivity of each part is determined and
 - (b) in a second step those parts of the allergen which have no detectable IgE reaction are combined to a mosaic antigen which comprises the amino acids of the allergen but the order of the amino acids of the mosaic antigen is different from that of the naturally occurring antigen.
2. (Currently amended) The process ~~Process~~ according to claim 1 wherein in the first step at least two parts of the allergen are prepared by chemical synthesis or by using the polymerase chain reaction and each part of the allergen is separately reacted with serum obtained from allergic individuals and the reactivity of IgE antibodies contained within such serum with each part of the allergen is determined.
3. (Currently amended) The process ~~Process~~ according to claims 1 ~~or 2~~ wherein the order of the parts of the allergen having no substantial reactivity with IgE antibodies obtained from allergic individuals does not correspond with the order of those parts in the naturally occurring allergen insofar as the part naturally occurring at the N-terminus and the part normally occurring at the C-terminus are replaced by each other.
4. (Currently amended) The process ~~Process~~ according to ~~any of the preceding claims~~ claim 1 wherein the allergen is a group 2 allergen.
5. (Currently amended) The process ~~Process~~ according to ~~any of the preceding claims~~ claim 1 wherein the allergen is the timothy grass pollen allergen Phl p 2.

6. (Currently Amended) The process ~~Proeess~~ according to claim 5 wherein the allergen Phl p 2 is split into three peptides, namely peptide 1 having amino acids 1-33, peptide 2 having amino acids 34-64 and peptide 3 having amino acids 65-96 of the amino acid sequence of naturally occurring Phl p 2 and the mosaic antigen is provided by linking the peptides in the order peptide 1, peptide 3, peptide 2.
7. (Currently Amended) A mosaic ~~Mosaie~~ allergen having the amino acid sequence of SEQ ID NO: 1.
8. (Currently Amended) A DNA sequence ~~having~~ comprising the nucleotide sequence of SEQ ID NO: 2 coding for the mosaic allergen of claim 7 or a sequence complementary thereto.
9. (Canceled)
10. (Canceled)
11. (Canceled)
12. (Canceled)
13. (Currently Amended) A vaccine ~~Vaccine~~ for the treatment of allergic patients characterized in that it comprises a mosaic allergen obtainable by ~~any a~~ a process according to ~~claims 1-6~~ claim 1 or the mosaic allergen of claim 7.
14. (Currently Amended) A vaccine ~~Vaccine~~ for the treatment of grass pollen allergic patients characterized in that it comprises a DNA sequence coding for a mosaic antigen obtainable by a process according to ~~any of claims 1-6 or claim 1~~, the DNA of claim 8 or a sequences complementary to ~~any either~~ of these DNA sequences.
15. (New) A method for treating an allergic reaction comprising administering a mosaic allergen obtainable by a process according claim 1 to a subject in need thereof.
16. (New) The method of claim 15 wherein the allergic reaction is caused by grass pollen.
17. (New) The method of claim 15 wherein the allergic reaction is caused by timothy grass pollen.
18. (New) The method of claim 15 wherein the allergic reaction is caused by timothy grass pollen allergen Phl p 2.
